

Installation of opencv in linux

1. Download latest version of opencv

(currently latest version is opencv-2.4.8)

<http://sourceforge.net/projects/opencvlibrary/files/latest/download>

2. Extract zip file in the folder you wish to build opencv, for example **opencv-2.4.8**

3. In terminal type following commands:

```
cd opencv2.4.8
mkdir build
cd build
cmake-gui ..
```

In the cmake-GUI click 'configure', then 'generate'. When the process is over close GUI.

```
make
sudo make install
```
